Profile Summary

Experienced Software Engineer with over 2 years in full-stack web development, specializing in **JavaScript, Python, React, and Django**. Proven track record in designing and developing scalable web applications and services.

Experience

Software Engineer

Aug 2023 – Present

Intel Corporation

Penang, Malaysia

- Designed and developed a web application to streamline signoff tracking, enabling real-time task updates and centralized approvals, **reducing approval turnaround time by an estimated 50%** and improving coordination among engineering teams.
- Developed web application using **React, Django, PostgreSQL, Carbon Design System** and **Bootstrap** to replace Excel spreadsheets for design specification, streamlining and improving the design workflow for design engineers, **reducing design specification time by 50%**.
- Developed and maintained automated quality assurance checks for both front-end and back-end design views using **Python**, ensuring IP data integrity throughout the design workflow.
- Automated integrity checks for individual library files using **Python**, catching issues at the point of generation and **reducing downstream debugging time by an estimated 30%**.
- Conducted code reviews sessions for an agile team of 8 developers across multiple projects, improving code quality and maintainability, **reducing post-deployment defects by 15%**.

Research Assistant

Oct 2022 – Jul 2023

Software and Informatics Research Centre, Ontario Tech University, Canada

Ontario, Canada

- Conducted a **systematic literature review** on technology-assisted mental health interventions and animal therapy, guiding the design of XR/VR-based therapeutic experiences.
- Built a **YOLOv7** machine learning model using **TensorFlow** to detect dog body language from images and videos, supporting the development of extended reality (XR) animal-assisted therapy solutions for mental health.
- Conducted **user testing sessions with vision-impaired participants** using XR prototypes, collecting insights through **interactive interviews, and qualitative analysis** to improve accessibility and therapeutic engagement.

Skills

- Languages:** Python, JavaScript, Java, C, SQL, HTML, CSS
- Web Frameworks:** React, Next.js, Django, Bootstrap, Carbon Design System
- Machine Learning Frameworks:** PyTorch, TensorFlow, scikit-learn
- Databases:** MongoDB, PostgreSQL, MySQL
- DevOps:** Git, GitHub, Docker, Kubernetes

Education

National University of Malaysia

Sep 2019 - Aug 2023

Bachelor of Science (BSc) in Computer Science | GPA: 3.89/4.00

Selangor, Malaysia

- University Gold Medalist (Best Graduate of the Faculty)
- University Senior Scholarship Recipient (Best Student of the Academic Year)
- Asia Pacific Seeds for the Future ASEAN Representative
- Canada-ASEAN Scholarships for Development Recipient

Projects

ETL Pipeline for E-Commerce

- Built an ETL pipeline to extract, process, and store Shopee e-commerce product data into a structured, high-quality data using **Python, Pandas**, and **Shopee API**, enabling accurate data analysis and supporting data-driven business decisions.
- Implemented data visualizations using **matplotlib** to identify sale trends, producing actionable insights for business decisions.
